

**THE LUXURY TRAVELLING LOO COMPANY**

## Single Re-circulating Chemical Loo Units

These self contained individual loo units are suitable for all outdoor events.

Measuring 4' (1.22m) square by 7'8" (2.4m) high the units are usually delivered with a full tank of hand washing water and primed with chemical. If siting of the units requires them to be tilted then the units will be primed and prepared for use on-site. In these circumstances we may require a fresh water supply on-site and it will also be necessary to empty the units of waste and water before they are removed.

The loos are delivered with loo rolls, the quantity of which is determined by the information given to us at the time of quoting; if guest numbers change before the delivery date please ensure that the office is aware so that adequate consumables are provided.

The units are not equipped with electric lights so should your event run into the evening it may be advisable to provide a camping light or alternatively site the units under an exterior light as the roof of the unit is translucent.

### Technical Information

**Water Tank Capacity - 45 litres**

**Waste Tank Capacity - 225 litres**

### Disabled Chemical Re-circulating Loo Unit

The disabled unit measures 5'1" (1.55m) square by 7'10" (2.4m) high, they include grabrails, disabled loo pan and alcohol handwash with lever dispenser.

### Technical Information

**Waste Tank Capacity - 225 litres**
